Lee Valley Rail Programme

As part of our Railway Upgrade Plan, we’re delivering £170m of improvements across the Upper Lee Valley from 2017 to 2019. The programme will enable two extra trains per hour and boost local regeneration.

**Meridian Water**
A brand new station will be built to replace Angel Road and serve the Meridian Water regeneration.
It will provide better connections to Stratford & London Liverpool Street, and north to Stansted & Cambridge. The station will serve the proposed 10,000 new homes and 6,700 new jobs at Meridian Water, as well as existing residents in the area.
- Replacing the existing Angel Road station
- Step-free access
- A new concourse with ticketing facilities
- Faster connections to London

4,000,000
At its peak, up to 4 million people a year are expected to use the station, equivalent to three times the population of Birmingham.

**Northumberland Park**
We’re upgrading the station, including building a new pedestrian bridge with fully accessible ramps.
- Building a new island platform
- Permanent closure of the level crossing to improve safety

The new station will help 11,000 football spectators travel to the new Tottenham Hotspur stadium.

**Tottenham Hale**
Better access for passengers, including improved connections between London Underground, National Rail and Bus services.
- A new island platform will allow more passengers to use the station
- New step-free footbridge with lift

13,000,000 people use Tottenham Hale Underground and National Rail services each year. That’s almost five times the population of Manchester.

Track Upgrade
We’re building an additional track between Stratford and Angel Road/Meridian Water to support the extra services and improve reliability.
- Install new overhead lines
- Replace and install power and signal cables

5,500m of new third track, containing 2,400 concrete sleepers – that’s almost twice the length of the QE2 Dortford Bridge
